

## Specification Sheet

### Angiomics™ human adipose microvessels, cryovial

Freshly isolated human adipose microvessels (haMVs) (20X)

haMVs cultured in 3D collagen (3 mg/ml) for 10 days after seeding with 100,000 microvessels/ml (20X).

haMVs cultured in 3D collagen (3 mg/ml) for 10 days after seeding with 100,000 microvessels/ml (40X).

### Features and Specifications

- Microvessels are isolated from subcutaneous adipose
- Age and sex of donor are provided with each lot.
- Each microvessel lot is qualified for positive neovessel growth activity
- Microvessels are available in either 20,000, 50,000, or 100,000 microvessels/vial
- Vials are frozen at the time of isolation and stored in liquid nitrogen

Microvessels are isolated from donated human tissue for use in research by informed consent or legal authorization.

The product is for **RESEARCH USE ONLY** and not for human use.
